Box No. V

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

from which the subject matter of independent claim 1 differs in that:

a connection means (36) for a shaped foam is provided on that side of the touch and close fastener facing away from the hooking elements (12), characterized in that the connection means (36) is formed by a plurality of projecting individual rods (38) which perform the attachment of the shaped foam without additional projections.

2.1

The subject matter of claim 1 is therefore novel (PCT Article 33(2)). The problem addressed by the present invention can therefore be considered that, in particular in the course of the subsequent high stress in daily use of the seat, the adhesion is often inadequate and it is not possible to exclude the touch and close fastener part being released from the foam.

2.2

The solution to this problem proposed in claim 1 of the present application involves an inventive step (PCT Article 33(3) for the following reasons:

document D2 discloses a touch and close fastener part with anchoring elements with projecting anchoring parts on the rear side of the support band in order to improve the adhesion to the shaped foam.

Starting from D2, a person skilled in the art would thus not find any indication of using a connection means with a plurality of projecting individual rods, that is of arriving at the subject matter of claim 1.

meet the PCT requirements for novelty and inventive step.
